

GPS-based Asset Tracking

Real-time visibility of the fleet

Track & manage Field Assets

Improve safety and security of assets

ServiceGPS enables field service organizations to locate, track and manage field assets via handheld or vehicle installed devices. Reduce travel times, fuel cost, and promote safe driving habits. Improve visibility with real-time street level asset tracking.

ServiceGPS integrates with ServiceScheduling and ServiceMobility, providing real time location information to dispatch managers in ServiceScheduling

ServiceGPS Benefits

- ✓ Improve driver safety and habits
- ✓ Gain total visibility and control of resources and assets
- ✓ Reduce costs through accurate mileage claims
- ✓ Reduce mileage, fuel costs and CO2 emissions
- ✓ Identify 'problem offenders' e.g. out of hours asset usage
- ✓ Improve support for emergency/exception situations
- ✓ Improve customer experience through accurate arrival times
- ✓ Ensure customers that a field technician is on route

ServiceGPS is an effective fleet GPS tracking solution that enables field service organizations to locate, track and manage field assets via handheld or on-board devices. Key features include real-time mapbased location details of resources, time-stamped daily history of GPS events and configurable real-time email alerts, such as speeding and arrival at home.

Locate, Track and Manage Field Assets

-  Reduce Fuel Costs and Windshield Time
-  Real-time map-based location details of resources
-  View of full route traveled via "bread-crumbs" trail
-  Time-stamped daily history of GPS events
-  Ability to view the location of the closest field resource to a customer site
-  Improve safety with real-time alerts (idle states, speeding, travel direction information, location arrival, crossing of geofences, etc.)
-  Configurable real-time email alerts, such as speeding and arrival at home
